

2.2.1 Choosing Recording Devices

Whether you are recording offline or to a desired Folder, you can choose the recording devices that you wish to record with. These devices include web cams, video cameras, audio inputs, screen capture, PowerPoint/Keynote and remote devices. To select the device you wish to use in your recording, simply check the box next to the device(s) listed within the Mac Recorder application.

Note: Audio and/or Video is required for all recordings to complete and be posted to the web. If recording from two separate computers, the Recorder will allow you to record with no audio or video selected, however, the session will not process until the other computer uploads the audio and/or video to the system. You will receive a pop up error message if no audio/video is selected when recording.

Notice the check box to "Record Audio/Video" is not checked.

Audio only

Audio + Screen Capture

Audio + Screen Capture + Keynote/PowerPoint

Video

To add video to any of the aforementioned recording scenarios, within the Audio/Video area of the Mac Recorder, click on the up/down arrows to select a video source.
